## Real hardwood.

A real snap to install.

## 4 easy steps

Recommended installation

### 1 Great wear layer. Genuine hardwood

- Same full hardwood look
- Finish can be screened and recoated unlike comparable products from the competition
- The thickest wear layer in the industry for this type of product, dry-sawn for a natural look, without repetitive patterns

### 2 Strong, stable, and ecological HDF core

- HDF is made with 100% post-industrial recycled wood fiber
- Stronger core for greater impact resistance
- Increased stability compared to other materials such as MDF
- Overall product less sensitive to humidity variations

### 3 Micro-V joint

- On all 4 sides of the board, the smallest and most uniform eased edge in the industry!
- It provides a better-looking, better-performing solution that conceals minor subfloor irregularities

### 4 Robust Rightloc™ system

- This ingenious system on all board ends and sides locks boards firmly together
- Fast and easy installation by only one person!
- No glue, nails, or staples required

### 5 Uniform color

- Stain and finish are evenly applied on board surfaces and micro-V joints, giving Mirage Lock products the best natural appearance on the market

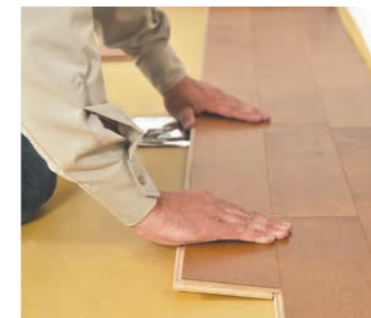

1

Prepare your floor surface and cover it with the recommended membrane. Take boards from several different boxes, alternating as you go to ensure the best look.

2

Start in the left corner of the room. Lay the first row of boards with the groove facing you, leaving at least a 1/2" gap from the wall. Install the next row, inserting the tongue into the groove at a 45° angle.

3

Press lightly on the boards to lock them in place. Use both hands to apply even pressure.

4

Lay subsequent rows in the same way.

**Important:** For complete installation steps, refer to the Mirage Lock Installation Guide available online or in the Mirage Lock flooring boxes.

## The most eco-friendly floor around!

- Mirage Lock products are made in North America from high quality wood that comes from certified, responsibly managed forests
- 6 times less hardwood required than conventional 3/4" solid boards
- Wood contents of the HDF are from 100% post-industrial recycled fiber
- Nontoxic hypoallergenic finish
- No volatile organic compound [VOCs] or formaldehyde in finishing products
- No dust from sanding or organic vapors from varnishing
